Production Process

- * There are 8 workshops a piece of wood must go through before it's called a hanger.
- * Wood must stay here for at least 3 months in order to get dry----Humidity above 16 degree is not acceptable. There have lotus, maple ,beech ,cedar ,ash ,pine ,walnut ect material can choose .
- * A perfect hanger will thought cutting +Sanding+making-up(Sanding and making-up will be done several times even after basement paint is done)+ 3 times painting +Assembling(logo +hook +clip)+QC(Each hanger goes out of our factory are checked and selected by six persons)+packing

- 1) Material selection to differ A grade and B grade for different hanger production at different levels.
- 2) Cutting material according to custom hanger size.
- 3) Shaping into custom hanger shape, and polish well.
- 4) Second selection, QC works.
- 5) Lacquering, QC works.
- 6) Assembly, QC works.
- 7) Packing, QC works.
- 8) Warehouse, final random inspection to mass production.

Quality Control

* For the hanger quality control ,we have a Strict control, the hanger is hard ,corrosion resistant ,dispel insects ,long shelf life ,smooth surface ,wear resistant ,good polish ability ,ect.

we refuse the hanger have insects infestation ,Burr ,mouldy ,nail out ,rust ,losing color ,humidity more than 16%,joint crack ect.

X Blue stain and mouldy is refuse

✓ Bar is smooth and high

X Mouldy is refuse

✓ Surface is smooth

X joint crack is refuse

✓ joint is perfect
