Working Principle

Attention

1. Put the lamp under the sun over 8 hours when use it the first time.
2. This solar light has light control function, it can identify day and night automatically.
3. The lighting time of our product depends on the brightness and range of irradiation of sunlight, please be aware of the charging time each day.
4. Please make sure no obstructions on the solar panel and avoid installing at bright place at night.
5. Do not open the charging part if you are not a professional technician in order to avoid damage to the product.
6. The lamp will keep strong light when someone is detected within the sensing area, after 30 seconds it will change to dim light.
