

LED UV disinfection lamp

Disinfection artifact that can fit into a pocket

Sterilization rate up to 99.9%
10 second rapid sterilization

Product parameters

Power: 1.5W
Material: ABS Color selection: white/Rose gold
LED QTY: 3pcs
Power supply: USB charging / 18650 lithium battery
SIZE:140*35*25mm
Product net weight: 87g
Disinfection time: 10 seconds
Carton Qty: 100pcs

A sterilization artifact that can be put into a pocket

Swipe gently to sweep thousands of bacteria

Swipe gently to sweep thousands of bacteria

DISINFECTION

Germ, mites, formaldehyde

Common family germs

It's that simple Sterilization is so simple

Ultraviolet rays destroy the DNA and RNA of microorganisms, making them lose their ability to reproduce and die, achieving the effect of disinfection and sterilization!

DNA helix

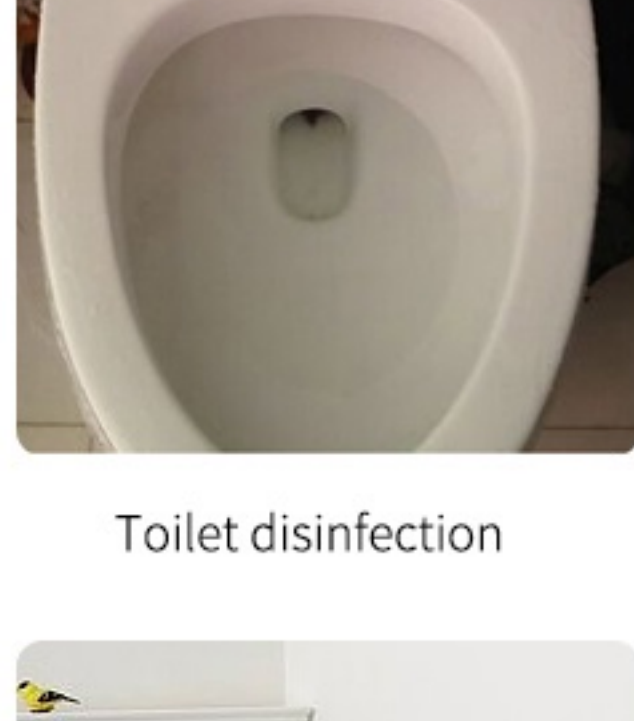

Before irradiation

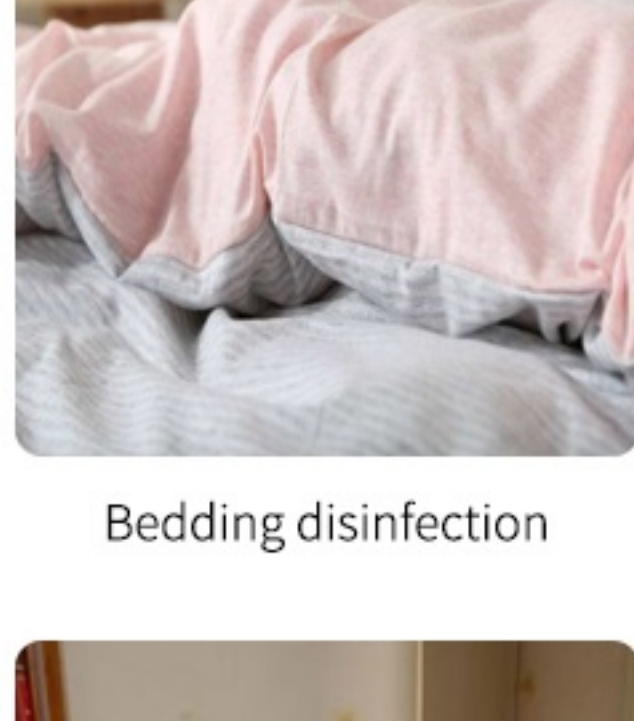

After irradiation

DNA strand break

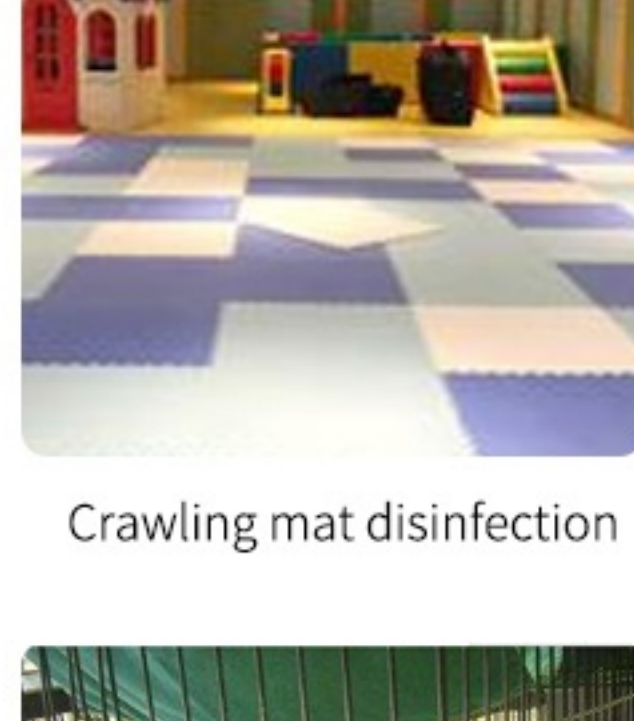

Where are you worried about sweeping?

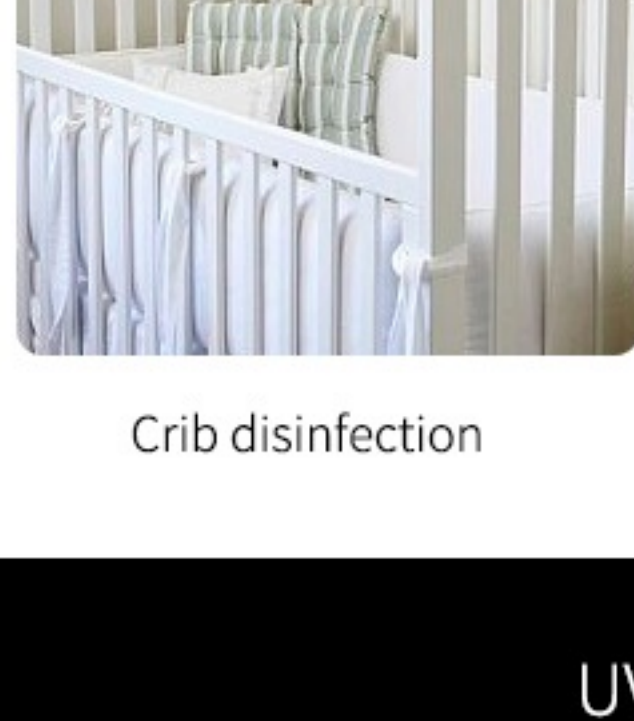

Toilet disinfection

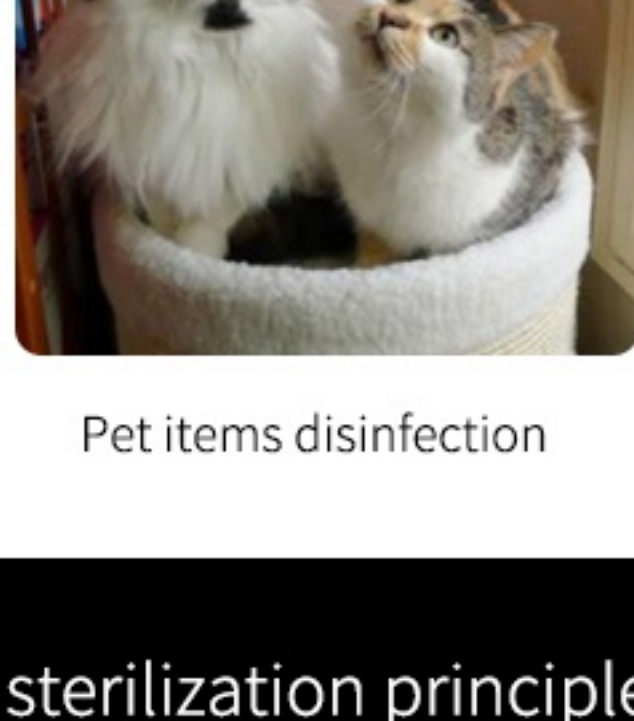

Bedding disinfection

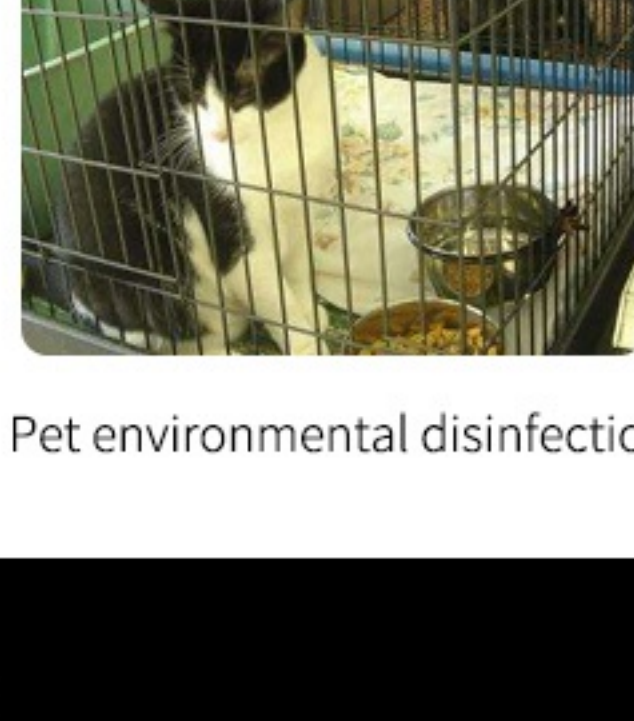

Crawling mat disinfection

Crib disinfection

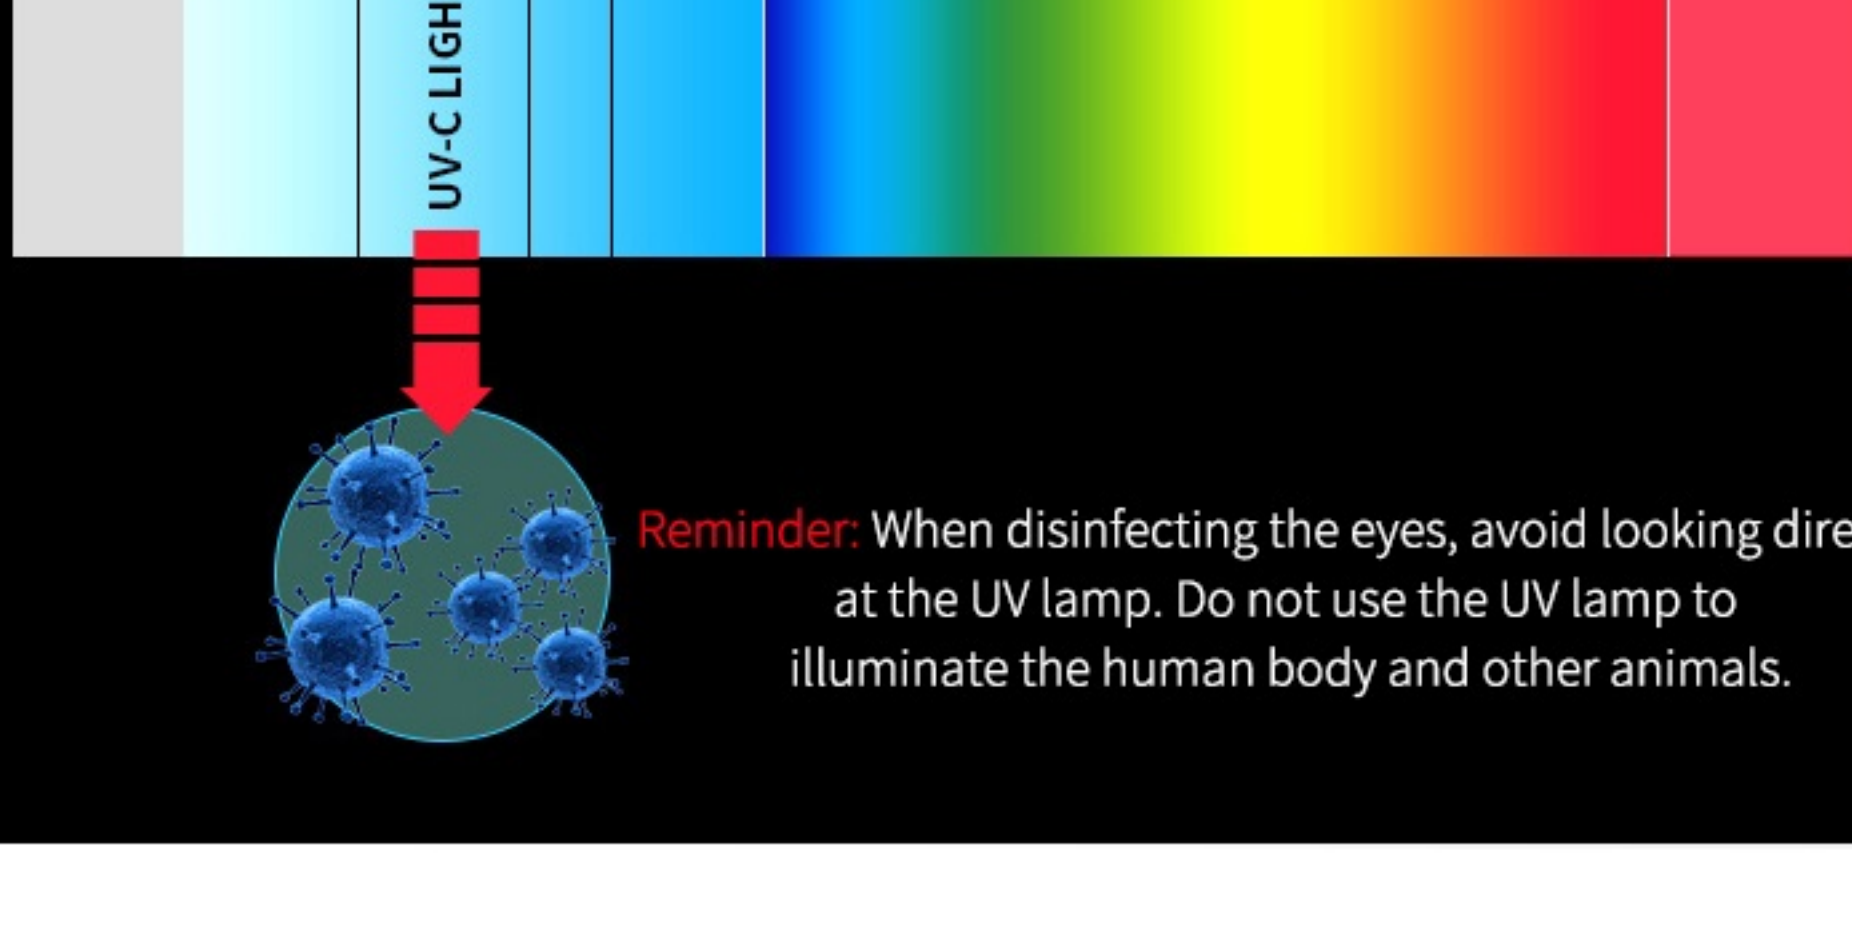

Pet items disinfection

Pet environmental disinfection

UV sterilization principle

Ultraviolet light is divided into four bands of A / B / C / D, and the C band has a bactericidal effect. Among them, the ultraviolet sterilization ability of 254nm is relatively strong.

Reminder: When disinfecting the eyes, avoid looking directly at the UV lamp. Do not use the UV lamp to illuminate the human body and other animals.

Products real shot

USB interface charging

A sterilizer that really fits in your pocket
