The area must be clean and dry for adhesive to stick properly.
Remove #1 release paper and do not remove #2 release paper at this step
Line-up the first regulate lever as shown and center the set on incision.
Remove #2 release paper and press the set to stick to the skin at same time.
Screw the regulate levers clockwise, repeat for each lever to fully close the incision, do not screw too tight at first time, so leave space for accurate adjustment.
Cover the strip gauze over the incision to absorb the exudate and cover the dressing on top of the set.
