**NOTICE:**

- Relay is on the “release” or “operate” status when being released from stock, with the consideration of shock risen from transit an relay mounting, relay would be changed to “operate” or “release” status, therefore, when application (connecting the power supply), please reset the relay to “operate” or “release” status on request.
- In order to maintain “operate” or “release” status, energized voltage to coil should reach the rated voltage, impulse width should be 5 times more than “operate” or “release” time. Do not energize voltage to “operate” coil and “release” coil simultaneously. And also long energized time (more than 1 min) should be avoided.
