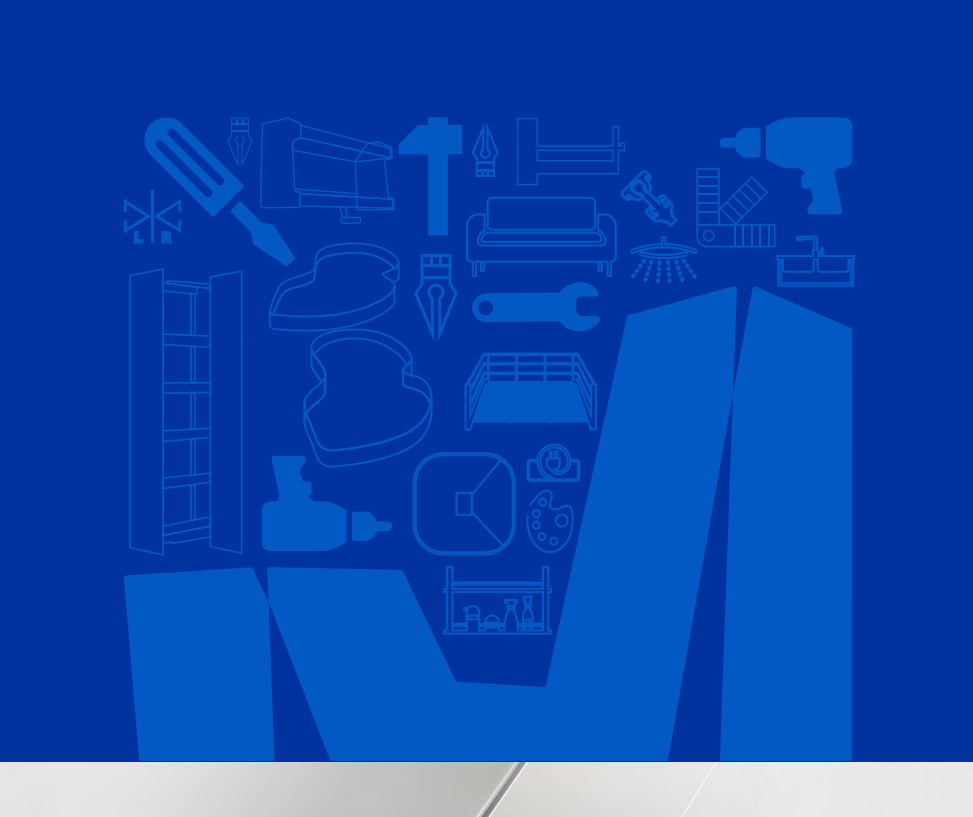
Installation manual



PDL2.0 Series Seasoning Pull Out Basket

HIGOLD®

Leading design Perfect experience. The beauty of industrial design

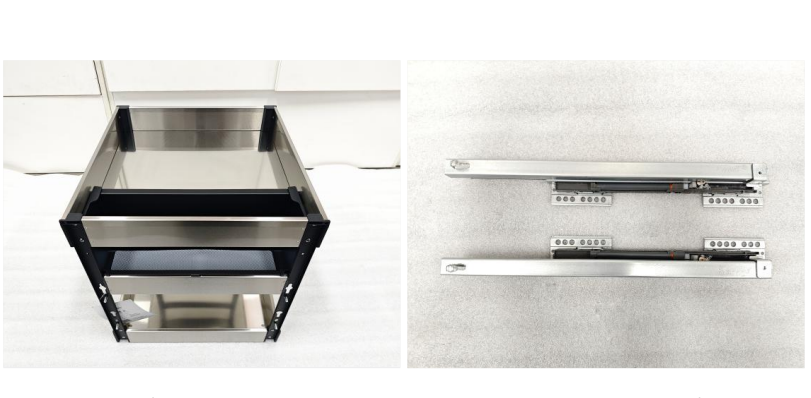
Please note before installation

The PDL2.0 series seasoning baskets are suitable for cabinets with a minimum depth of 500mm and a minimum installation height of 600mm. The width should be selected according to the cabinet size. Please pay attention to the cabinet size during installation.

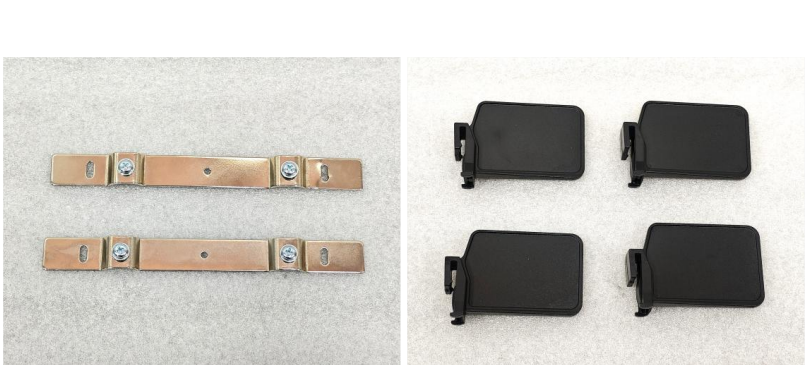
STEP · 01 ·

List of accessories

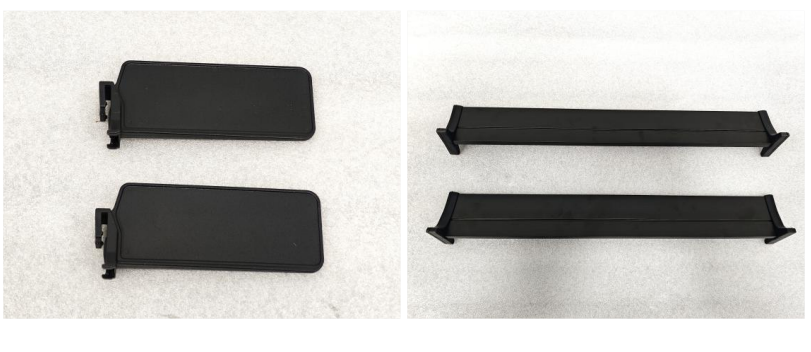
Installation is demonstrated here using a 450 cabinet (18-board standard cabinet) as an example.



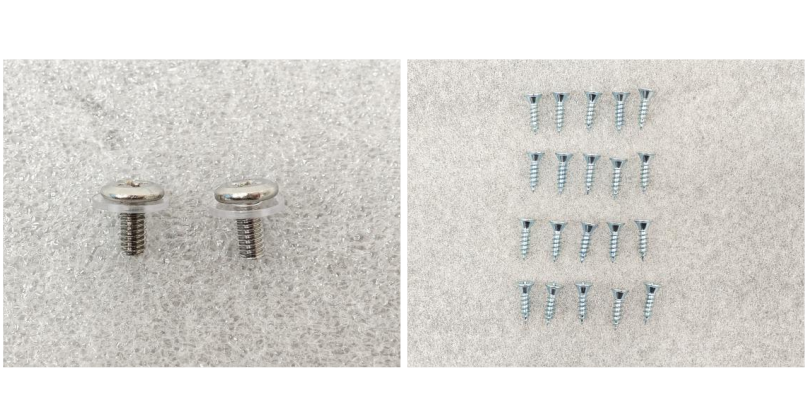
Seasoning Pull Out Basket Body*1, Rail*1SET



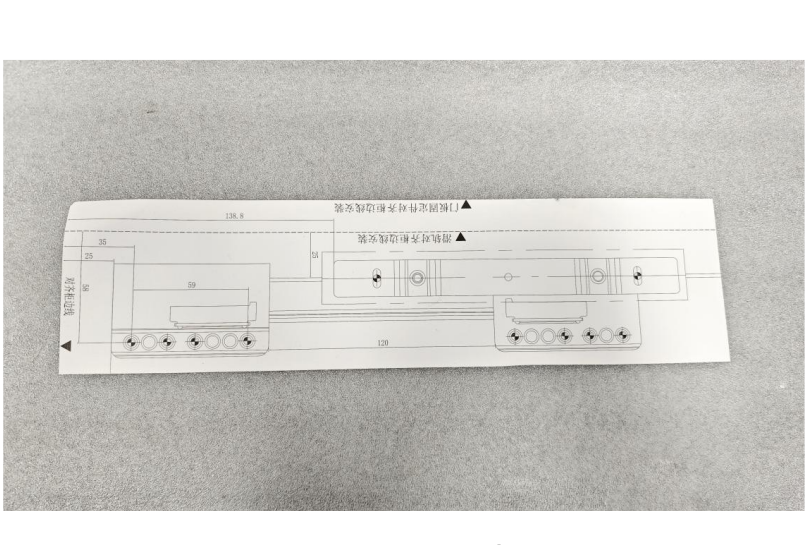
Door fixings*2, dividers - short*4



Divider - long *2, metal divider *2



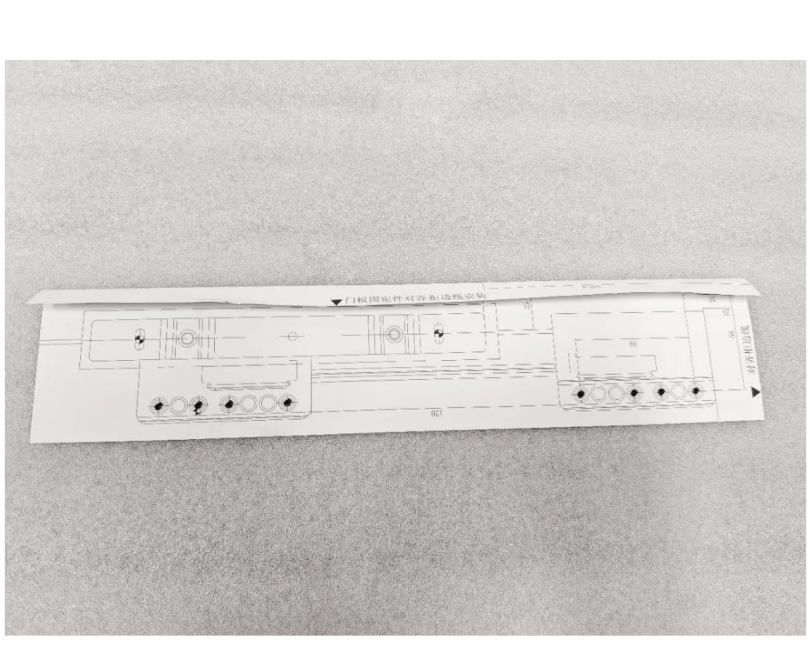
2 pcs M4*8 screws (with pre-installed plastic washers), 20 pcs ST4.0*16 self-tapping screws



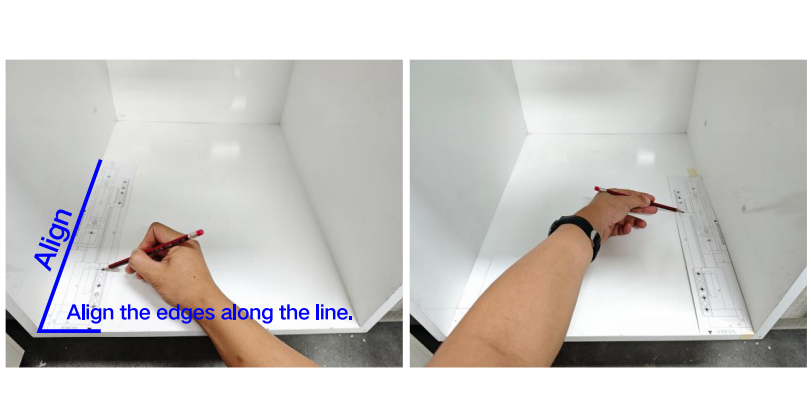
Installation template (including rail installation template and door panel installation template) *1

STEP · 02 ·

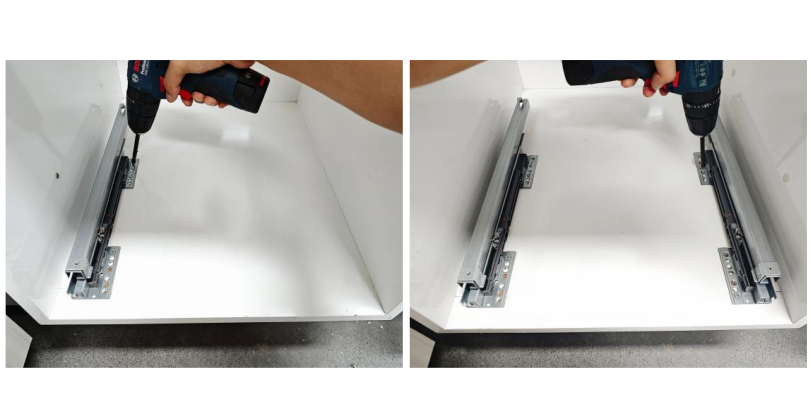
Installation of slide rails



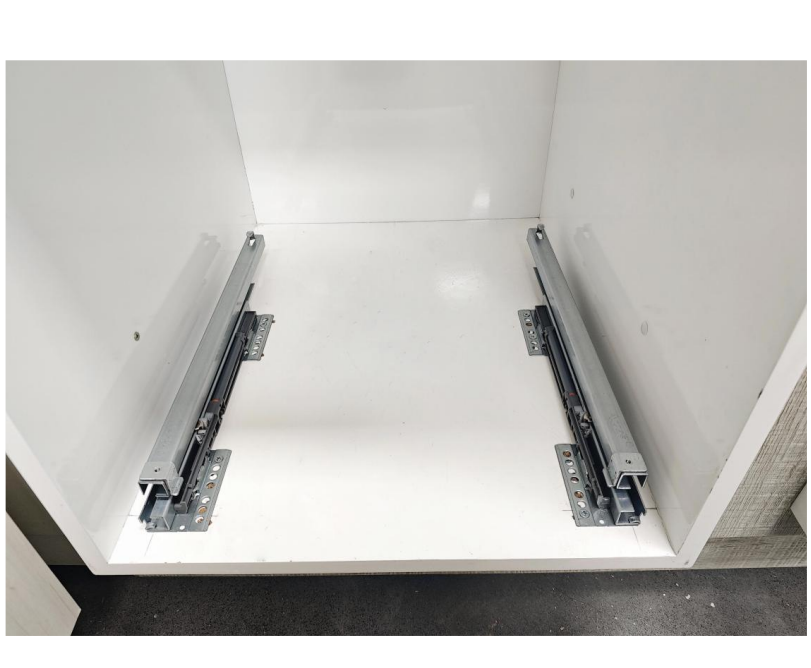
Before installing the slide rails, fold the installation template along the dotted line firstly.



After folding the installation template in half, align it with the front edge and side edge of the cabinet, then use a carpenter's pencil to mark the positions of the slide rail fixing holes (left/right).



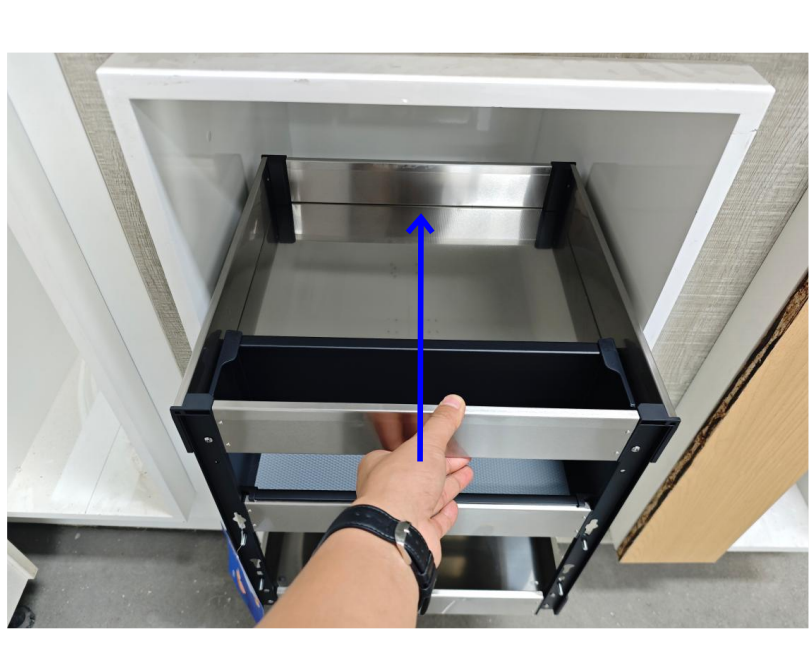
Align the slide rail holes with the marked points, and secure the slide rails (left/right) using ST4.0*16 self-tapping screws. To ensure the bearing capacity and stability of the slide rails, at least 6 self-tapping screws should be used to fix each side of the rail.



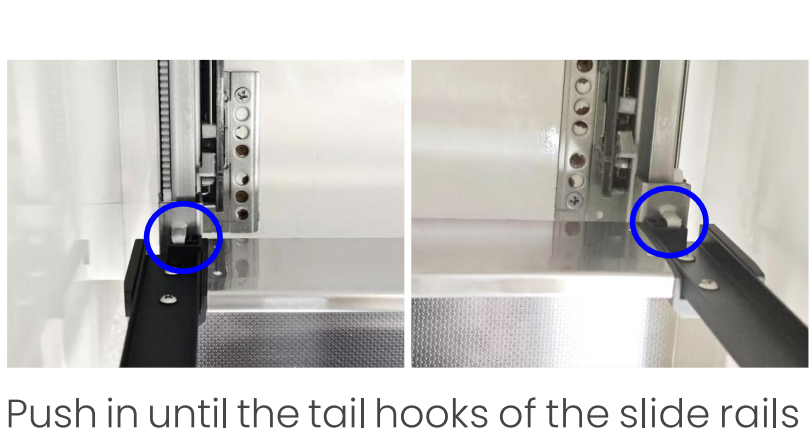
Slide rail installation completed.

STEP · 03 ·

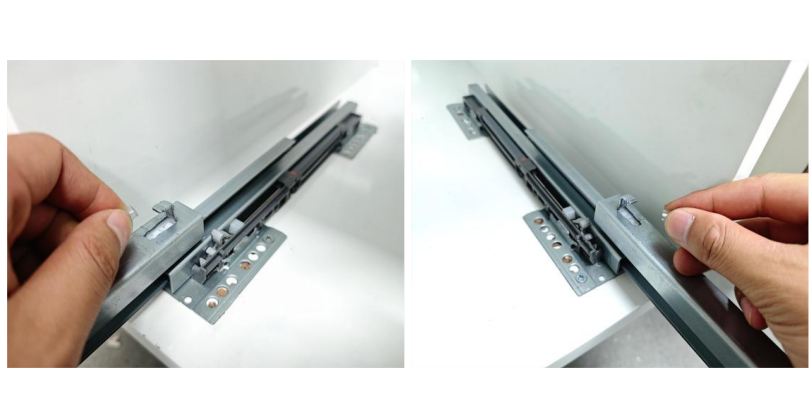
Seasoning Pull Out Basket Body Installation



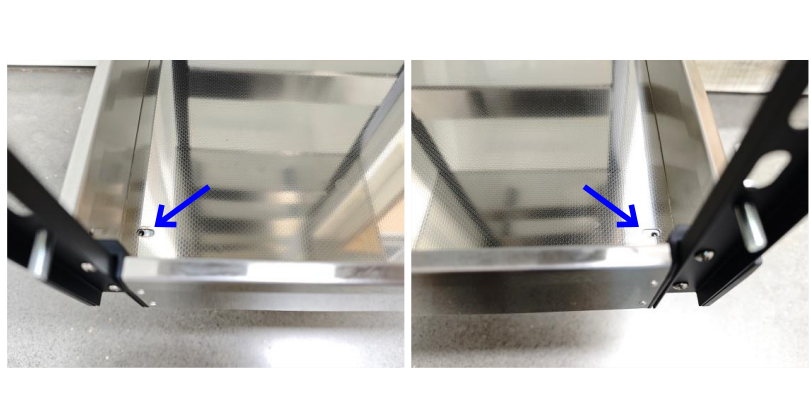
Place the seasoning basket body on the rail and push it in backwards.



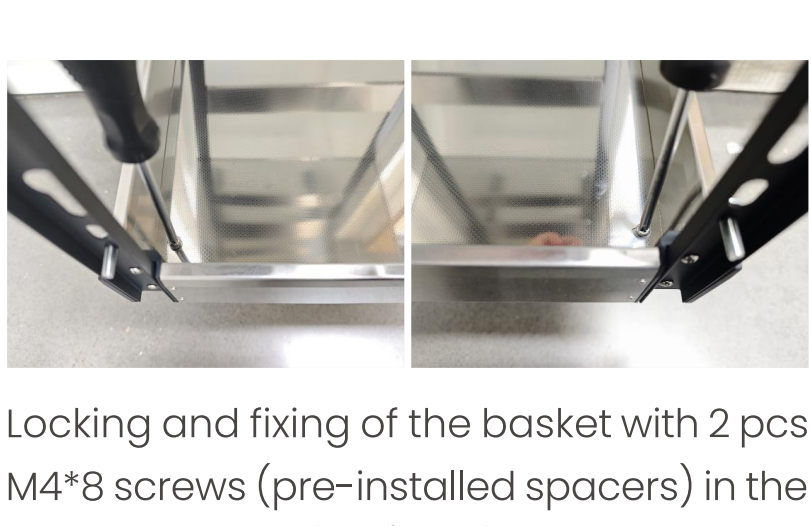
Push in until the tail hooks of the slide rails snap into the rear grooves of the basket body (left/right).



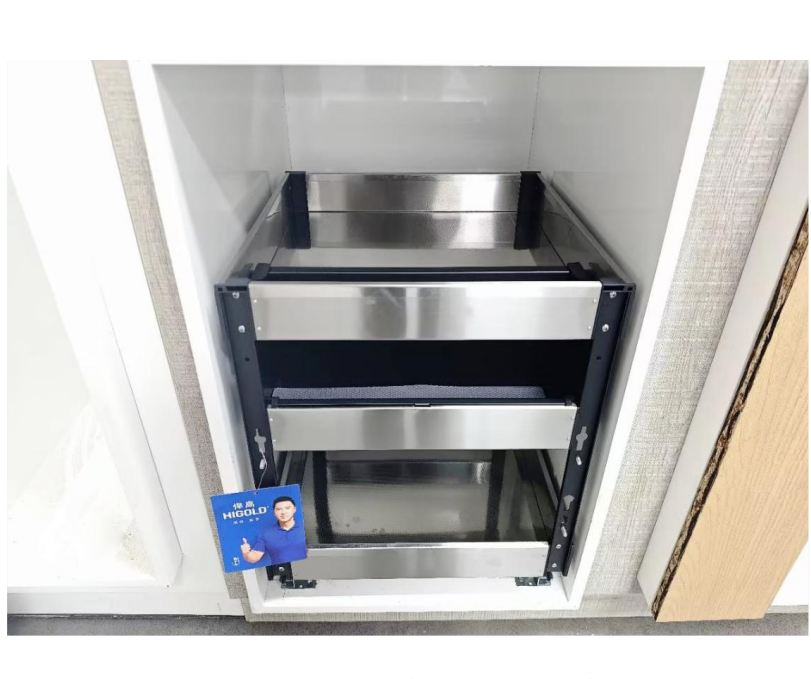
Note: The rail rubber sleeve can be freely selected according to the cooperation degree between the tail hook of the guide rail and the groove of the basket. If it is not tight enough to fit into the groove of the basket, the tail hook rubber sleeve can be removed.



Adjust the front elliptical holes of the basket body to align with the front holes of the slide rails.



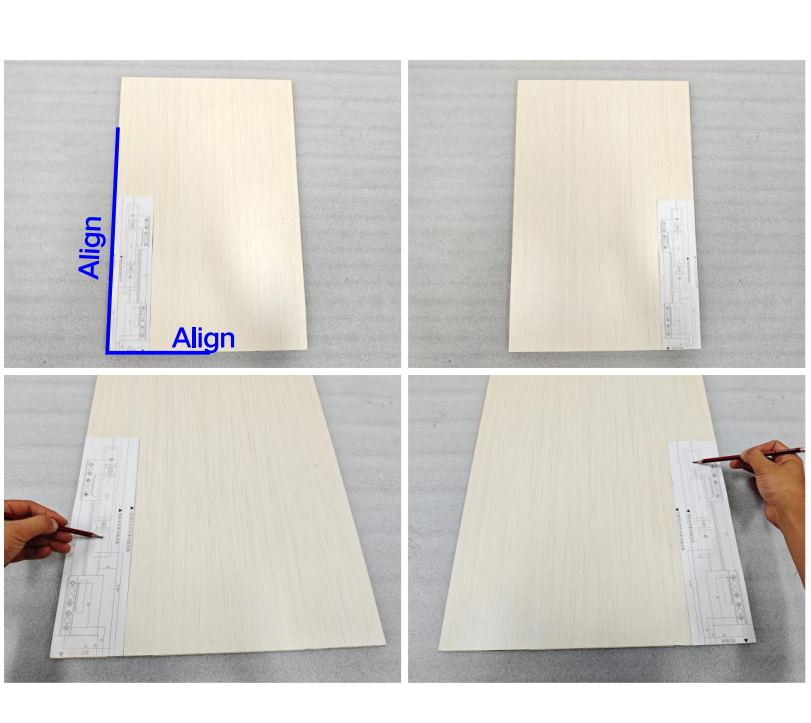
Locking and fixing of the basket with 2 pcs M4*8 screws (pre-installed spacers) in the front oval holes (left/right).



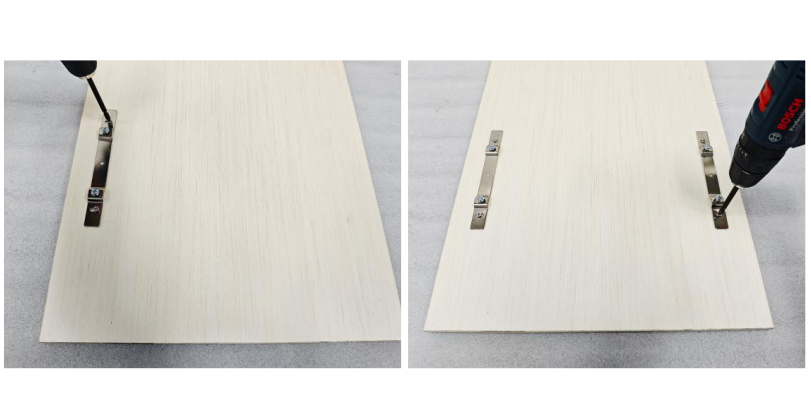
The installation and fixation of the basket body are completed.

STEP · 04 ·

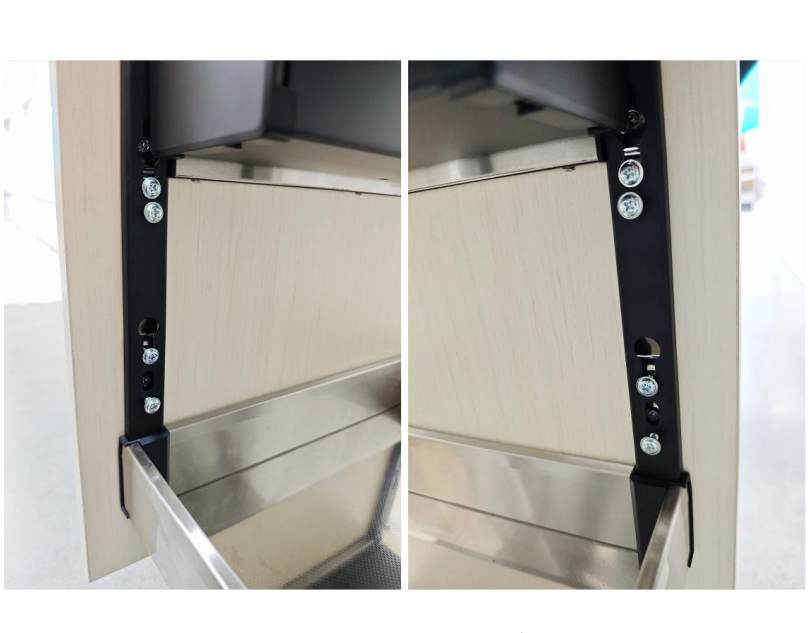
Door Panel Installation



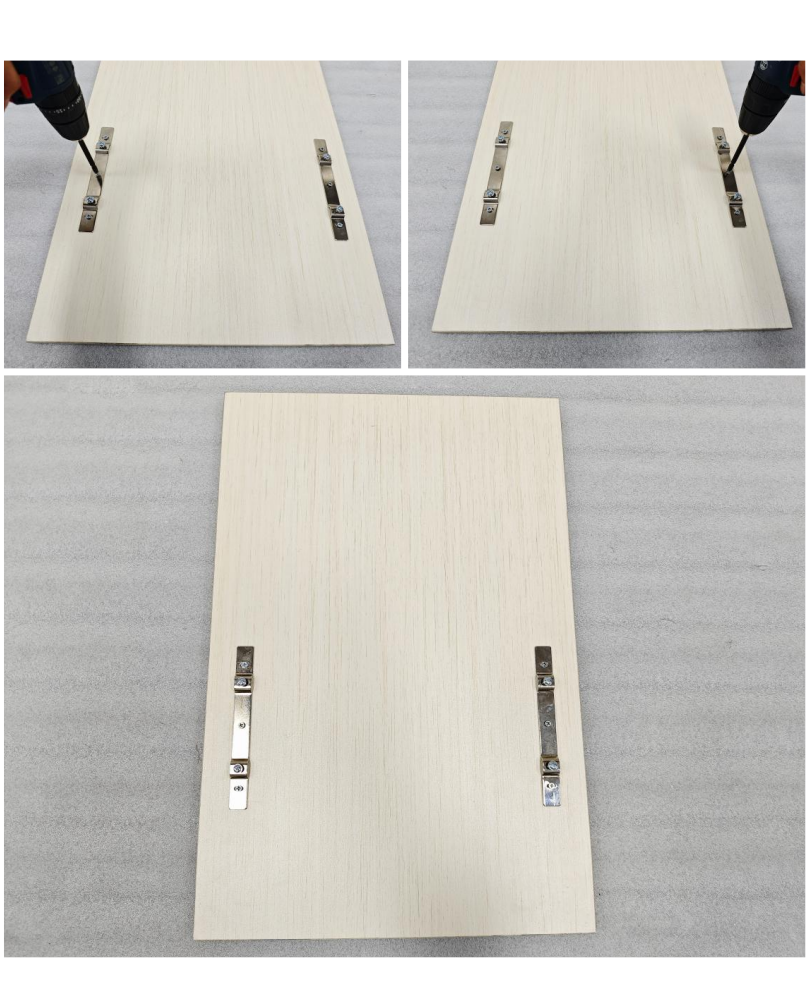
Use a standard cabinet door panel. Align the door panel installation template with the side edge and bottom edge of the door panel, and mark the positions of the fixing holes (left/right) with a carpenter's pencil.



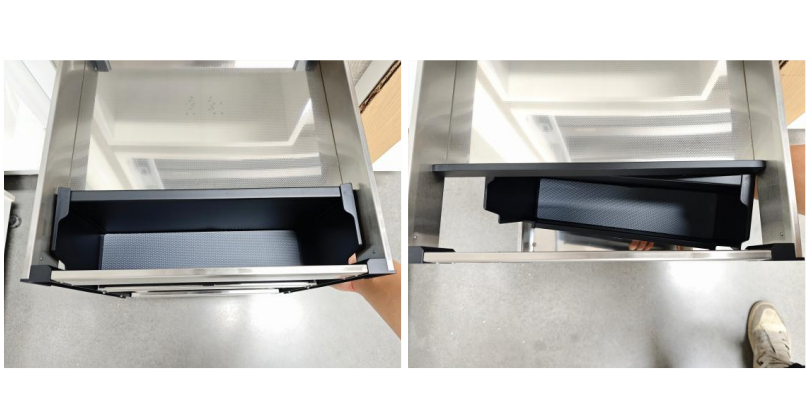
Install the door panel fixing parts. Align the elliptical holes of the door panel fixing parts with the marked points, then fix them with 4 pcs ST4.0*16 self-tapping screws (left/right) without fully tightening.



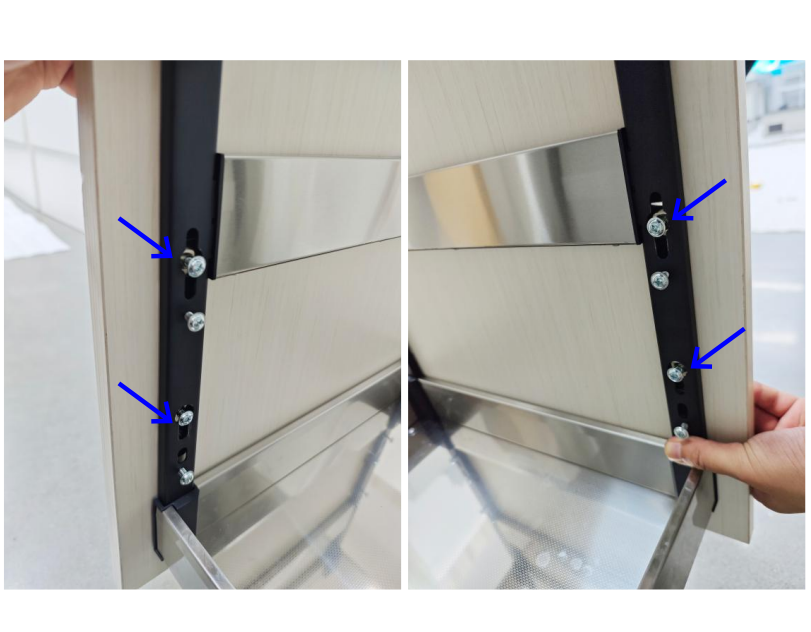
Pre-hang the door panels into the basket frame corner pieces and adjust the left and right positions of the door panel fixings so that the door panels are aligned on both sides.



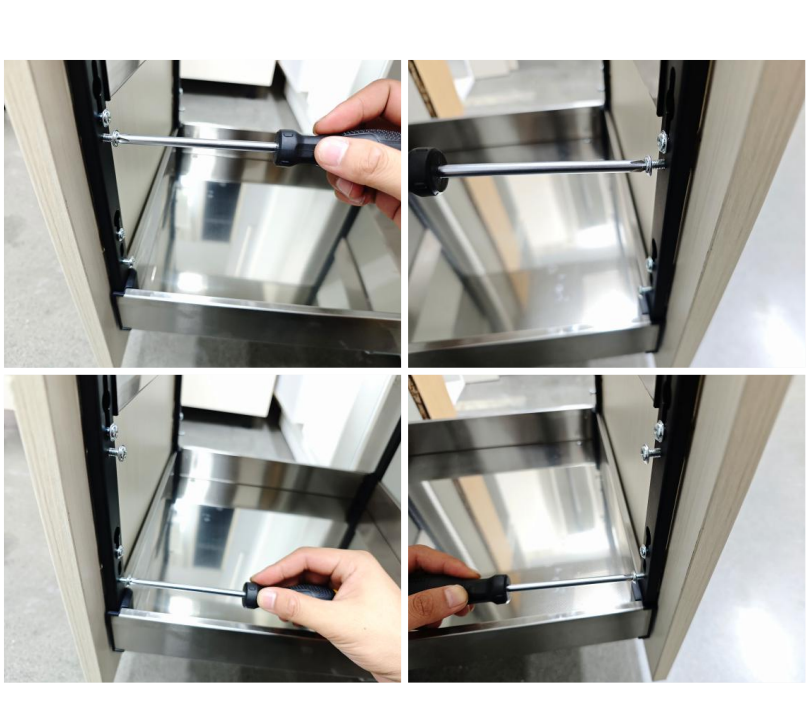
After adjusting the left and right positions of the door panel fixings, lock the four self-tapping screws in the oval holes, and add two ST4.0*16 self-tapping screws in the middle of the door panel fixings to reinforce the locking.



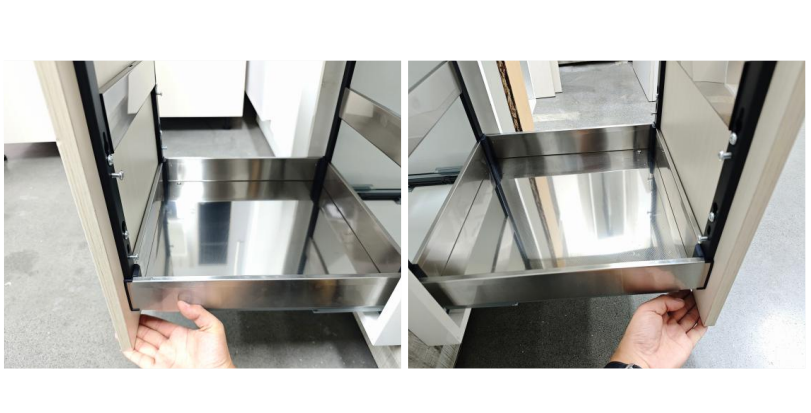
Remove the tall bottle rack to facilitate the installation of the door panel. Lift it up and remove it from the bottom.



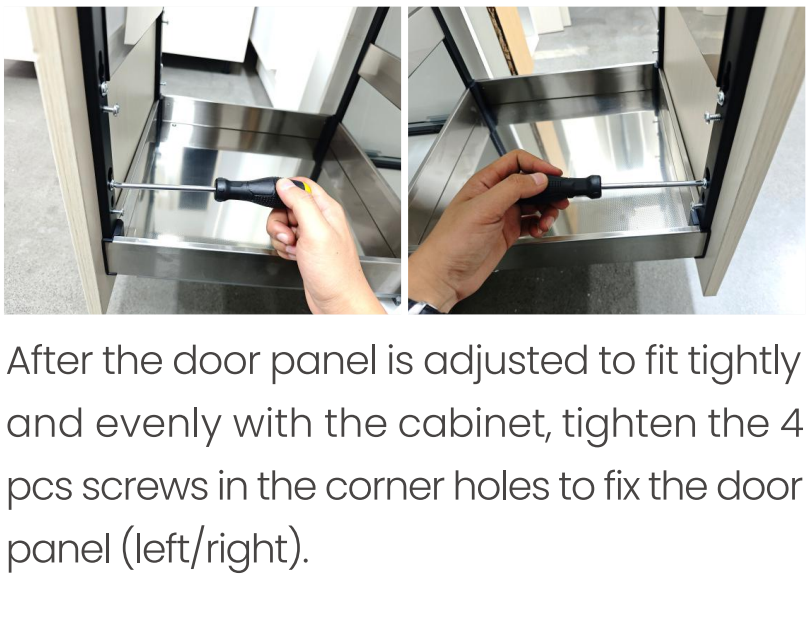
Rehook the door panel into the corner piece holes.



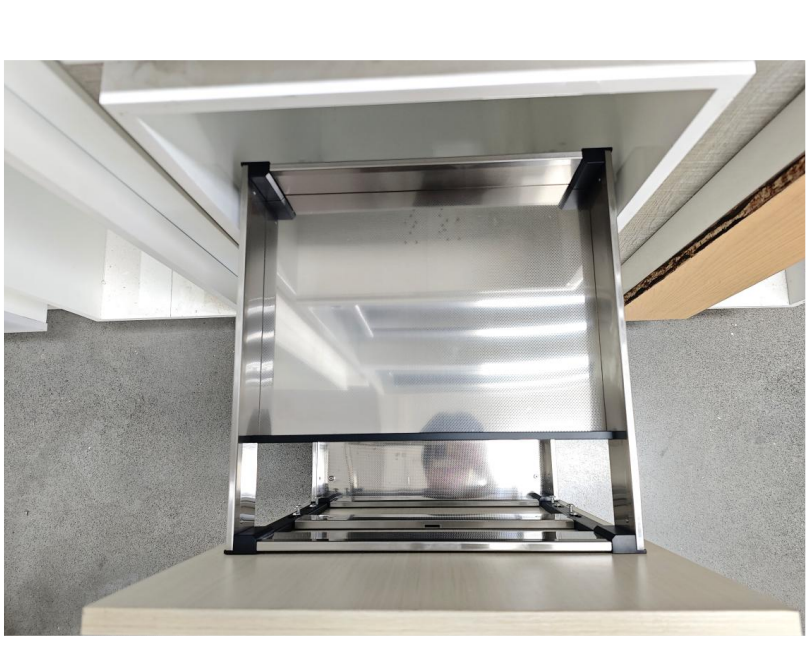
Adjust the 4 pcs pre-installed screws on the corner pieces allows for adjustment of the door panel's front and rear angle (left/right).



Adjust the top and bottom of the door panel to be flush with the cabinet (left/right).



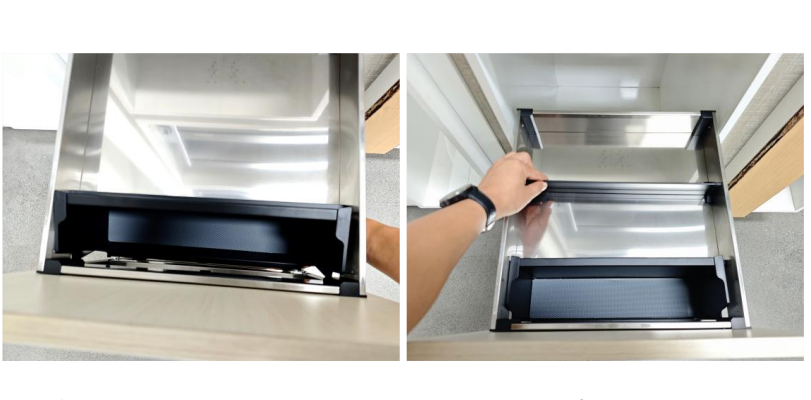
After the door panel is adjusted to fit tightly and evenly with the cabinet, tighten the 4 pcs screws in the corner holes to fix the door panel (left/right).



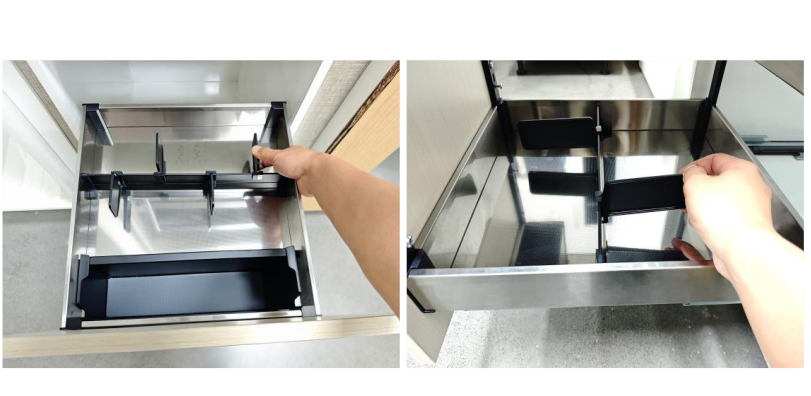
The door panel installation is completed.

STEP · 05 ·

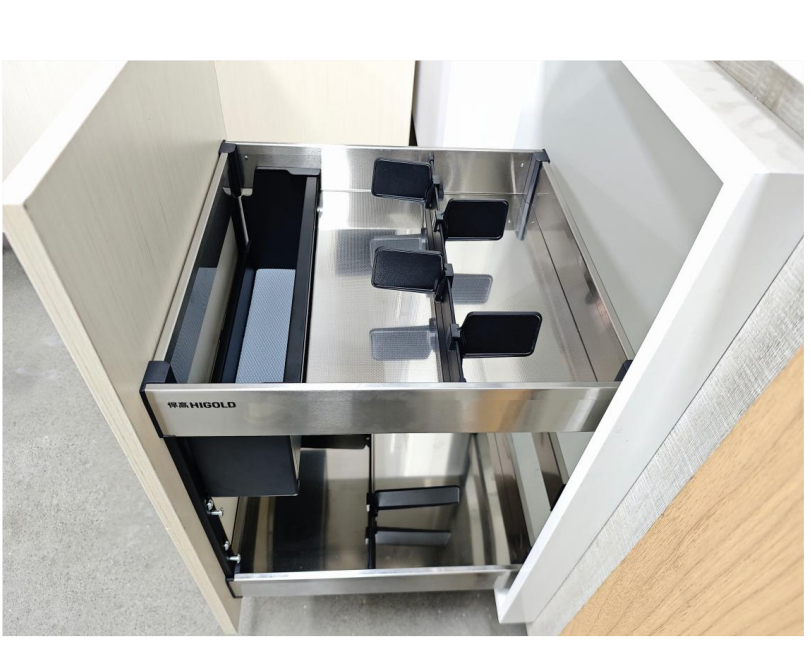
Accessories Installation



Reinstall the tall bottle shelf and place metal dividers on both sides by clamping them tightly.



Align metal dividers to snap into the short dividers and long dividers.



The installation of the PDL2.0 Series Seasoning Pull Out Basket is completed.
