storage drawer basket*1, aluminum partition*1, slide*1 SET, long storage boxes*2, U-shaped partition*2, ST4.0*16mm self-tapping screws*12.

STEP - 03 -

Installation Of The Drawer

The installation of SHEARER series storage drawers is based on the universal method. The specific operations are as follows:

Installation Of The Slides

Before installation, make sure the left and right slides are at the same height and install them on the same level.

Note that the minimum installation height is ≥ 300 mm and avoid the door hinge position.

On the horizontal reference line at the same height on both sides, pre-drill the first reference point 33mm away from the cabinet edge, pre-drill the second reference point 50mm away from the first reference point, and pre-drill the third reference point 224mm away from the second reference point.

Align the guide rail holes with the three pre-drilled holes and use self-tapping screws to fix them (left/right). Once fixed, tighten the screws in other holes.

The slide installation is completed, and the distance between multiple layers of slides should be ensured to be ≥ 300 mm.

Installation Of Storage Drawer Body

Lift the rear end of the basket, align the front end with the guide rail, push it inward until the front end of the guide rail is close to the inside of the frame, and lay the basket flat.

Press the Velcro on both sides.

Basket body installation is completed.
