

RDSLZ-82-2000A Intelligent Primary Current Injector

RDSLZ-82 series Intelligent Primary Current Injector is the necessary equipment in the electrical debugging of all walks of life. It is used in power plants, power transformation and distribution stations, electrical equipment manufacturers, scientific research, laboratories and other units. It belongs to short-time or intermittent working system. It has the characteristics of small volume, light weight, good performance, convenient use and maintenance.

Product features

1. Small size, light weight and good performance.
2. Easy to use and maintain.
3. 7-inch true color HD digital screen

Product specifications and technical parameters

1. Rated capacity: 12KVA
2. Input voltage: AC 380V
3. Input current: 31.5a
4. Output voltage: 6V
5. Output current: 2000a
6. Current accuracy: ± 0.5
7. Display mode: 7inch true color HD digital screen
8. Touch mode: more accurate resistive touch
9. Operation mode: automatic, manual
10. Data storage: 60 groups

Note: our company makes products with different specifications and special functions according to the requirements of users.
