

YDJ-150KV AC High-voltage Oil Immersed Test Transformer

YDJ series oil immersed power frequency AC high voltage test transformer is a new type of high voltage test transformer product produced after improvement according to the standard of test transformer. YDJ series oil immersed power frequency AC test transformer has the characteristics of small volume, light weight, compact structure, complete functions, strong versatility and convenient use. It is especially suitable for power system, industrial and mining enterprises and scientific research departments to test the insulation strength of various high-voltage electrical equipment, electrical components and insulating materials at power frequency or DC high voltage. It is an essential equipment in high voltage test.

product features

1. Oil immersed test transformer has compact structure, stable and durable, and low price.
2. Small size, light weight, simple and intuitive wiring, easy to use.
3. Good insulation reliability and beautiful appearance.

product specifications and technical parameters

Specification	Capacity kVA	high voltage side		low voltage side		Measurement ratio	temperature rise°C (30 mins)
		voltage kV	current mA	voltage V	current A		
20/150	20	150	133	400	50	1500	10
30/150	30	150	200	400	75	1500	10
50/150	50	150	333	400	125	1500	10
50/200	50	200	250	400	125	1000	10
50/300	50	300	170	400	125	3000	10

Note: can be customized according to the user, non-standard products, parameters are not in the scope of the table.
