

Novel Coronavirus (2019-nCoV) Real Time Multiplex RT-PCR Kit

Product Introduction

It is used for detection of the nucleic acid specific sites (ORF1ab, N gene) of the COVID-19 in the

Product Components

Product Features

For Delta variants

COVID-19 Delta variants can be detected;

High sensitivity

accurate detection of less than 500 copies/mL;

Short-time

1 hour to complete the rapid detection of samples;

High specificity

the hot start technique was used to detect the ORF1ab gene and N gene of the virus at the same time to achieve double positive detection;

High tolerance to impurities

highly optimized buffer system to achieve compatible tolerance to a variety of interfering substances.

Product Operation

Sample collection

Add the reaction solution according to the instructions

Run the test
