

SARS-CoV-2 Neutralization Antibodies /IgG Detection Kit

(Colloidal Gold Method)

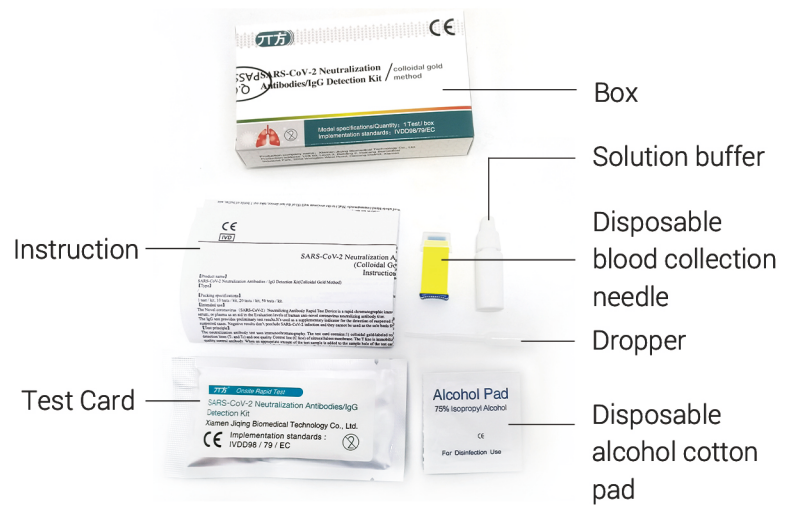

Product Introduction

The New Coronavirus (SARS-Cov-2) neutralization antibody rapid detection kit is a rapid immuno-chromatographic assay for the detection of neutralizing antibodies of SARS-Cov-2 in human blood, serum or plasma. It is helpful to evaluate the neutralization antibody titers of new coronavirus in human body.

Product Components

Product Features

Simple

easy to operate, without instruments and professionals, can be detected at home;

Fast

test results can be obtained in 15 minutes;

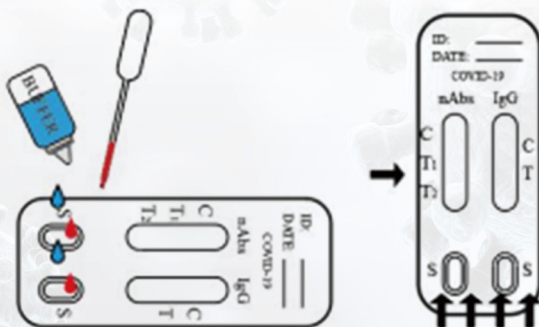

High sensitivity

high quality, high affinity recombinant New Coronavirus S-RBD antigen marking two detection lines, can detect the strength of neutralizing antibodies.

Room temperature

Storage at 4°C-30°C, convenient for transportation at room temperature.
