Wireless HD Endoscope Camera System

Application

It can be used for optical endoscopy and treatment in clinical departments such as ENT, head and neck surgery, ICU severe, anesthesia, gynecology, urology and anorectal departments. Especially in scenes where the traditional camera system is inconvenient to use, such as mobile emergency consultation, ward rounds, endoscopy teaching, and out-of-hospital clinics, it has a unique wireless mobile portability advantage.

Storage

Storage bag, powerful storage function, waterproof, with adjustable shoulder strap.

Optional aluminum storage box.

Feature

- Compatible with international standard optical endoscopes, the endoscopes can be disinfected by general methods.
- The handle comes with wireless wifi, lithium battery and SD Card.
- The appearance design accords with ergonomics, and the whole machine is waterproof.
- Use HD video capture and transmission, multi-terminal wireless display.
- With automatic white balance, picture and video capture and save functions
