

INSTALLATION FOR LED CEILING LIGHT

① For safety, turn off main power prior to installation.

② To open the light, turn the lampshade to a certain angle (counterclockwise).

③ Drive the screws into the junction box, with 2/3 inside and 1/3 outside.

④ Connect the three input lines (Black is L, white is N, blue and yellow is ground line) of the lamp with the output lines of the junction box.

⑤ First, align the ceiling light chassis with junction box screw, Screw it into the junction box by hand as the direction shown in the figure (counterclockwise), then use a screwdriver to fasten the junction box screw.

⑥ Check the four mounting points in the chassis and the four small gaps in the lampshade. Match them up and down, then turn clockwise to the right place.

⑦ Restore main power to make sure the light is well installed.
