**Product name:** Zinc Flake Paste

**Advantages:** High purity zinc/Regular shaped/Large diameter-thickness ratio;

The anti-corrosive coating made from the zinc flake paste has good performance in corrosive resistance, no oxygen brittle, higher permeability, higher adhesion, higher anti-friction, higher weather resistance, higher chemical resistance and stability, as well as environment friendly with no pollution, what's more, for the same salt spray/anti-corrosion effect, it reduces the consumption zinc and saves the cost.

**Application:**

Dacromet/Geomet technology, Zinc-Cr Coating material;

Being widely used in organic coatings, surface treatment and spraying for car, boats, radar, warship, tank, spare parts, iron tower, subway engineering and the like.

**Chemical property and features:**

Zinc flake paste is produced by the the proprietary technology and made of raw material with high purity and concentrated particle size. Because the regular shaped zinc flake parallels and overlaps each other on the surface of coating layer, it greatly prevents the water and corrosive medium penetration through the layer into the substrate to improves the corrosion resistance effect.

Use for dacromet water basic

Grade	Average Particle Size D50(um)	thickness um %	Solid content %	water coverage cm <sup>2</sup> /g+/-10	packing
JHW-19	19	0.2-0.3	90	4000	25kg drum
JHW-13	13	0.1-0.2	90	5000	25kg drum

Use for zinc rich solvent basic

Grade	Average Particle Size D50(um)	thickness um %	Solid content %	water coverage cm <sup>2</sup> /g+/-10	packing
JH-19	19	0.2-0.3	90	4000	25kg drum
JH-13	13	0.1-0.2	90	5000	25kg drum
