Application:

Platelet incubator is widely used in blood transfusion departments, blood centers, blood stations and scientific research laboratories in hospitals, and is an important equipment to ensure the safety of blood for clinical use and the smooth conduct of scientific research experiments.

Features:

- * High quality cold plate hot spray shell, flat surface, inner liner mirror 304 stainless steel laser welding, easy to clean.
- * The tray adopts mould injection molding, which solves the storage safety of platelets.
- * Three-dimensional air duct design with circulating fan, so that the equipment inside the forced air cooling temperature circulation, to ensure the uniformity of internal temperature.
- * High quality AC servo motor, smooth work, low noise, long service life.
- * Double-layer electric heating tempered glass door, good temperature insulation effect, effectively avoid the observation window fog, keep the box temperature constant for a long time.
- * The bottom is equipped with casters and support foot, easy to move, can adjust the level. (Not applicable to BJPX-SP05)
- * Using real-time digital signal monitoring, micro-processing PID control, information processing is fast.
