

5-Part Auto Hematology Analyzer Reagent

Introduction:

Hematology Analyzer Lyse WFL-LH: used to destroy red blood cells, dissolve hemoglobin, and maintain the morphology of the cells to be analyzed before blood cell analysis, so as to facilitate cell classification and counting or hemoglobin quantitative determination.

Hematology Analyzer Lyse WFL-LD/WFL-DIFF/WFL-VDIFF: used to maintain cell morphology and perform white blood cell five-part differential counting.

Hematology Analyzer Diluent WFL-2: used to dilute samples and prepare cell suspensions before blood cell analysis.

Hematology Analyzer Diluent 10xWFL-2: used to dilute samples and prepare cell suspensions before blood cell analysis.

Concentrated version of diluent WFL-2, which needs to be diluted before use.

Probe Cleaning Solution II: used to cleaning the instrument regularly.

E-Z Cleaning Solution: used to clean and rinse the injector, valve and piping system. Cleaning the instrument regularly.
