

Doppler Fetal Monitor

Features:

Precise measure

Intelligent noise reduction

Clear fetal sound

Zero microradiation

High sensitivity

Notice light

Rechargeable batteries

Compact and portable

Applications:

Doppler Fetal Monitor is a small and portable fetal heart rate monitoring instrument. It is suitable for fetal heart rate detection and fetal heart sound monitoring for middle and late pregnancy women. Using intelligent noise reduction technology, the fetal sound is clear, the measurement is accurate, safe and reliable, and it is a common fetal monitoring instrument for obstetrics and families.

Technical Parameters:

Model	BK-TH-8A
External Size	75*180*30mm
Net Weight	260±20g(include battery)
Ultrasonic Output Intensity	10mW/cm ²
Ultrasonic Output Power	8mW
Nominal Acoustic Operating Frequency	3.0MHz
Measuring Precision	1bpm
Measuring Accuracy	≤±2bpm
ATM Range	70kPa-106kPa
Ambient Temp. Range	5-40°C
RH Range	30%-80%
Battery Information	DC9.6V battery
Power Supply	100V-240V, 50/60Hz
Packing Size	310*225*90mm
Gross Weight	670g
