

Flow Cytometer

FlowCyt B7H&FlowCyt B7

Introduction:

FlowCyt B7

Flow cytometer is a high-precision analytical and sorting instrument widely used in life sciences, medicine, immunology, and other fields. It integrates fluid mechanics, optics, electronics, and computer technology to rapidly analyze and sort individual cells (or particles) in a liquid suspension. By detecting scattered light signals and fluorescent signals from cells labeled with specific probes, the instrument can quantitatively measure multiple physical and chemical properties of cells (such as size, granularity, surface antigens, and intracellular components) at a speed of thousands to tens of thousands of cells per second, enabling high-throughput, multi-parameter, and non-destructive cellular analysis.
