

## Hypochlorous Acid Water Generator

### Application:

Suitable for family, school, nursing home, maternity center, central kitchen, food processing, cold chain, public places, epidemic prevention, animal husbandry, agricultural planting and other fields of daily disinfection, sterilization, deodorization, purification, etc.

### Features:

- \* Hypochlorous acid water can be prepared only by electrolysis of salt water. It is slightly acidic (PH 5.0-6.5), non-corrosive, safe and reliable.
- \* The bactericidal ability is 80-100 times that of sodium hypochlorite.
- \* It can produce hypochlorous acid water quickly and efficiently.
- \* It has the advantages of safety, environmental protection, extensive, rapid and efficient sterilization, no need for secondary flushing, and direct discharge after use.
- \* Various concentrations of disinfectant water can be adjusted, and can be used in various occasions such as home, medical treatment, and laboratory.
- \* The cost of preparing hypochlorous acid is low, and the cost performance is high.

### Technical Parameters:

Model	BL-150
Output Capacity	150L/H
Available Chlorine Concentration	30ppm, 50ppm, 90ppm
PH Value	5.0-6.5
ORP	≥600mV
Residual Chloride Ion	<1000mg/L
Power	1100W
Power Supply	110/220V, 50/60Hz
Product Size	692*542*617mm
Net Weight	70kg
Packing Size	806*651*772mm
Gross Weight	85kg
