

Optional Accessory

* Infusion support

Introduction

It is a commonly used transfer device in medical and rescue scenarios. It is widely applied in hospitals, emergency centers, nursing homes and other places, mainly for safely and smoothly transporting patients with injuries or illnesses, or for enabling the movement of patients between different areas(such as wards, operating rooms, examination rooms) during the medical process.

Features

- The overall framework is formed by welding stainless steel pipes, which is sturdy, durable and elegant.
- The bed surface is made of plywood and high-elastic sponge, and is covered with a black leather finish.
- Using silent castors, they rotate smoothly, are safe and stable, highly wear-resistant, and have no noise.

Technical Parameter

Model	MFDJC-01B
Material	Stainless steel
Frame Size(L*W*H)	2000*650*660-850mm
Net Weight	60kg
Packing Size(L*W*H)	2030*700*520mm
Gross Weight	64kg
