

High efficiency precipitator

Summary:

High efficiency precipitator, also known as fast sedimentation tank, is a supporting device for water turbidity purification. It is widely used in the treatment of high turbidity raw water in small and medium-sized water supply and drainage projects.

Characteristic:

The unit adopts a new process of two-stage mixed reaction and rapid sedimentation.

- a. Compact structure, small volume, no mechanical transmission, convenient operation and management.
- b. High processing efficiency, good effect, stable performance and no noise in operation.
- c. The medicine is fully utilized, the consumption is saved, and the recurrent cost is low.

Technical parameters:

| ltems Model | Water yield (m3/h) | Height (mm) | Inlet nozzle | Outlet nozzle | Diameter (mm) | Diameter of sludge discharge pipe | Vent diameter |
|----------------|--------------------------|----------------|-----------------|------------------|------------------|---|------------------|
| KCG-21 | 21 | 3900 | DN80 | DN100 | 2200 | DN80 | DN80 |
| KCG-32 | 32 | 4000 | DN100 | DN150 | 2500 | DN100 | DN100 |
| KCG-42 | 42 | 4000 | DN100 | DN150 | 2800 | DN100 | DN150 |
| KCG-50 | 50 | 4100 | DN125 | DN200 | 3100 | DN150 | DN175 |
