

## PHOTOVOLTAIC (PV/ DC) SURGE PROTECTION MODULE PVTMOV...

Nowadays, Photovoltaic systems (PV System) range from small, rooftop-mounted or building-integrated systems with capacities from a few to several tens of kilowatts, to large utility-scale power stations of hundreds of megawatts, and in the meanwhile the potential impact of lightning events increases with PV system size. Where lightning occurrences are frequent, unprotected PV systems can suffer repeated and significant damage to key components. This results in substantial repair and replacement costs, system downtime and the loss of revenue.

PROSURGE has developed a high performance but low cost solution for the industry of PV/DC power electronics, a surge protection module **PVTMOV** which is size optimization and space efficiency, will be easy integrated on printed circuit boards (PCB) and close to sensitive electronic element inside device, to minimize the potential impact of lightning events.

PROSURGE® **PVTMOV** employ high energy Metal Oxide Varistor (MOV), and constructed with patented thermal protection and arc extinguishing technology which ensure safe disconnection while faulty current or abnormal voltage happened. It is generally known that the metal oxide varistor (MOV) is an ideal component for limiting surge voltage and current as well as for absorbing energy, but MOV may go into thermal runaway and result in short circuit due to sustained abnormal voltage (TOV) or end of life, that may cause fire hazard and significant losses to customer. Prosurge® surge protection modules have comprehensively improved the safety performance and proven to be excellent fail-safe and self-protected protective devices because of patented technology.

PVTMOV is PCB solderable module, especially for inverters, PV combiner boxes, converters application etc.

### KEY BENEFIT

- TUV certified Class II/T 2 PV SPDs per IEC/EN 61643-31
- UL recognized Type 1ca surge protection modules per UL 1449 4<sup>th</sup>
- Completely meet IEC/EN 61643-11, EN50539-11 standards
- PCB mounting design and can be mounted close to the sensitive electronic element protected.
- Compatible with reflow and wave soldering procedure
- Compact size to save installation space
- High discharge capacity up to 25kA 8/20 due to heavy-duty metal oxide varistor (MOV)
- High reliability, fail-safe and self-protected, quick thermal response and perfect circuit cutoff function thanks to special thermal disconnecter design with arc extinguishing device (Patented).
- Wide operating temperature range (-40~+110°C)\*
- Reliably at high altitudes location (-500m~+4000m qualified)
- Floating remote signaling contact for fault indication.

Note: Please point out while ordering, the temperature range of standard production is -40~80°C

**PROTECTIVE CIRCUITS**

The PROSURGE surge protection module must on all accounts be connected parallel to the electronic circuits to be protected.

There are three recommends protective circuits for PV/DC application while PROSURGE® PV/DC surge protection modules are used.

**RECOMMENDED SOLDERING PROFILES**

**PVTMOV TECHNICAL DATA**

Part No.		PVTMOVxxx/S									
		48	100	180	200	300	400	500	600	800	1000
