

CAFU

CAFU Pipe Belt Conveyor

We use specialized software such as Tekla Structures, AutoCAD Mechanical, Solidworks, etc. to design your Pipe belt conveyor.

**Our conveyor are robust and durable.
It is used in mining, cement, power plants,
metallurgy and other industries.**

Industries such as mining, cement, power generation and metallurgy provide the basic raw materials and power for social development. But without robust equipment in these industries, the materials cannot be transported to the end point in a stable and efficient manner. Machines that operate under demanding conditions need a trusted and comprehensive service provider to ensure that advanced productivity is maintained.

Choose CAFU to stay ahead of the competition in your industry.

Pipe Belt Conveyor

In addition to the performance characteristics of ordinary belt conveyor, pipe belt conveyor has more outstanding features. It can transport all kinds of materials in airtight, which is widely used in the industries of iron and steel, power generation, paper making, grain, salt making and chemical industry. The conveying line can be arranged along the space curve, and the small curvature radius in the horizontal and vertical plane can reach 300 times of the pipe diameter.

Lower total cost of ownership

Reducing TCO is the goal from the time of purchase to the time of use.

- Low installation costs
- 365 days spare parts supply
- Ruggedness and durability
- Long service life

Delivers reliability you can count on

All-bolt assembly construction for quick installation

- Extremely simple steel construction
- All parts bolted together, no welding on site
- Long distance conveying
- Smooth and reliable operation

Maximum economic efficiency

The CAFU Pipe Belt Conveyor offer the best solution for efficient and safe bulk material handling.

The standard modular CAFU Pipe Belt Conveyor can be delivered quickly and you'll receive your conveyor 20-30% faster than a general suppliers, so you can increase capacity sooner!

CAFU Pipe Belt Conveyor

Dia. (mm)	Width(mm)	Pipe belt conveyor systems belt speed v/(m/s) and capacity LV(m ³ /h)									
		0.8	1	1.25	1.6	2	2.5	3.15	4	4.5	5
100	430	17	21.2	26.5	34

Main Structure

Pipe belt conveyor is mainly composed of driving device, conveyor belt, rollers, tensioning device and so on. The conveyor belt is in the shape of a pipe, which can transport materials in a closed way. The drive device provides power, and the rollers support and guide the conveyor belt. The tensioning device ensures the proper tension of the conveyor belt. It has a compact structure and is suitable for a wide range of material transportation.

The information provided in this document is for general guidance only and does not constitute a warranty of any kind. Product designs are subject to change at any time without notice. For detailed product information, please refer to the drawings provided by our account manager.
