Water Quality Analyzer

-  Tinier & Smarter Photometer
-  Simpler to use
-  Faster Automatic calibration
-  Less interference
-  Easier to transport

Water quality analyzer is a high-precision intelligent instrument developed based on modern optics, electronics, computer science and other advanced technologies for practical testing. It is being used with test strips to measure water quality. It only takes 5 seconds to get accurate result of each element from the water sample. The instrument is perfect for schools, general commercial services and homes to conduct preliminary screening with simple instructions and low price. And for those who have difficulty reading color charts, the instrument is the best choice as well.
