## Merit and Feature

1. The Kudusworld tire coupling using natural compounds makes couplings suitable for use in most conditions.

2. Hand combinations of parallel, angular and axial displacements

Parallel displacement( $\Delta E$ ) : 1% of out dia

Angular displacement : with in  $2^\circ$

End float ( $\Delta d$ ) : within -10% and +3% the width of the coupling

Paralled displacement

Angular displacement

End float

3. Quickly and easily installed and configured without any special tools. No lubrication is required after installation, and components do not need to be removed during inspection.

4. Effectively reduce torsional vibration and absorb impact load.

6. Damping reduce vibrations and torsional oscillations.
