Technical Data Sheet

LongGreen S-80

Rubber products accelerator S-80

Product Description: Yellow, Solid

product description:

S-80 is a curing agent for all natural and synthetic rubbers, which require a quick incorporation in the mix and an excellent dispersion of the sulphur. Due to the homogeneous dispersion in the rubber the occurrence of localized overcured zones is avoided, which ensures an improved resistance against ageing and dynamic fatigue. The good dispersion of sulphur is of particular advantage in soft compounds, in which a problem-free distribution of the sulphur is often very hard to achieve. The user in touch into the eye will cause temporary pain, should be immediately cleaned with a lot of water; Operation LongGreen 9346 protective glasses should be worn.

The data in this information are accurate and credible. Because the use of the products is not under the supervision of Shenyang Longdelun Technology Co., Ltd., the company does not bear any legal responsibility for all the recommended projects. The data listed here can only be approximate, not as product specifications. Shenyang LongGreen Technology Co., Ltd. declares that: the reliability of the data is related to its use, because the company's products will be used together with other materials during the application process, so the company does not provide any guarantee.
