What is the Buildex stone coated roofing tile?

Stone coated steel roof tile is made from **Aluminum Zinc Coated steel + stone chips + acrylic glue**. The result is a more durable roof that still retains the aesthetic advantages of high end roofing such as classical or shingle tile. Stone coated steel roof is considered by many to be the most durable and long lasting of all metal roofs, which are also energy efficient and extremely environmentally friendly.

HERITAGE

With 7 vertical lines on each bond, a new combination of modern and traditional roofing style.

A nice option to improve the attractive appearance for your new roof.

MID-EAST POPULAR STYLE

ROMAN

Roman takes the strong flowing curves of a spanish tile and combines them with the strength and durability of stone coated steel.

So you can achieve the Spanish Tile style without the inherent weight and cost of clay tiles.

Why BuildEx- Stone Granules

All Buildex roof tiles are coated with natural stone chips, volcanically formed and taken from quarries in French. These coatings add natural beauty to the roof and a hard layer of protection from the weather. Being of natural stone, the vibrant colour is protected against the extreme UV of the African sun and will never change.

 **France Introduced CL Stone Granules**

High production capacity and reliable granules manufacturer in the Asia-Pacific region

CL ROCK LTD

Using the same raw materials of stone granules with Korean brand.

Some unknown brands that use dyed sand and sell them at low prices

Dyed stone chips

Color Faded

Sand off

AL-ZINC Steel

All Buildex® roof products are manufactured from alu-zinc steel which have shown in tests to last 6-9 times longer than ordinary galvanized steel roofing products.. As a pioneer of using **alu-zinc steel, Zn-Al-Mg Steel**. Buildex® has unrivaled experience in long-lasting steel roof tile manufacture. Especially, our main materials are AZ150g/m2 and AZ120g/m2 in Aluminum Zinc. It is more rustproof and has longer durability roofing sheets.

Surface Coat

Buildex® Acrylic resin glue has strong sticky strength and good weather resistance after cohere. Using the acrylic resin super glue will make the stone granule stick firmly on the aluminum zinc steel plate. Ordinary glue with bad adhesive but lower cost, easily makes granules leak in a short time and at different temperature. And the surface will change under certain weather conditions.

BUILDEX: After Scratch Test

Patented high-end acrylic adhesive bonding material; quality assurance for more than 50 years.

OTHER BRAND: Base metal be seen

Very bad quality bonding adhesive, so that stone chips will separate from metal surface.

FAQ

1: Delivery time?

7-15days.

2: Packing Method:

PE film + fumigated wooden pallet.

3: Payment terms.

For full container: 30% T/T as deposit, the rest paid against B/L copy.

For leak container: 50% T/T as deposit, the rest paid before loading.

4: MOQ.

500pcs per design and color.

5: Does the color fade?

Metroof uses the same granules as many South Korean brands by a famous brand- CARLAC GROUPE from France, we offer you a color warranty of 20 years with no fading.

7: Does stone chip off from the sheet easily?

The surface of the Acrylic top coat is made of thermoplastic acrylic components of the one-component quick-drying paint, drying by 50 meters of oven, the surface will be strong. Especially our quality control department checks roof tiles carefully before palleted.
