

Production Flow of Stainless Steel Hook

1. Production Flow Chart

2. Production Flow

● Mold Making

In our workshop, we have own mold machining department, we have 6 cutting machines, 2 lathes machines and 1 CNC machine. All of pressing molds are designed and made by ourselves, it can save much time when making a new mold. And it also can save some mold fare when our customers would like to make customized products.

● Punch Forming

We have 20 ordinary punch machines, 6 of 60T Model size punch machines, 2 of 160T Model size punch machines and 4 hydraulic punch machines. We can produce 8000~10000 pcs/day, it can meet all kinds of the hook production.

Semi Finished Products

- **Welding**

We have 2 welding machines and 10 welding production line. And we can weld over 10,000 pcs/day.

- **Surface Treatment**

There are two common use surface treatment, shot-blasting and surface passivation. There are 4 shot-blasting machines and 1 passivation production line.

● **Finished Products: Assembly & Packing**
