

Ledwide Standard  
Linear Profile  
Range 2023-2024

# Ledwide Company Presentation

Company

LEDWIDE Lighting, **established in 2010**, specializes in designs, develops and manufactures custom-made LED lighting for architectural, residential and commercial industries. From concept or enquiry to development and production of all the elements. Our products are based on proprietary aluminum extrusions for strength and cool operation. Our light engines are assembled to customer specifications addressing brightness, color temperature, and efficiency.

We work together with lighting wholesalers, lighting designers, architects to provide the end user with the perfect solution for their applications in **40+ countries**.

### Graphics Department

LEDWIDE Lighting has a graphics design department that designs every single product package, the annual catalogue and website. All product photos are taken in our own photo studio.

### Technical Department

All our products go through all tests required by different lighting standards in order to satisfy the requirements of our international customers. All our products comply with the latest CE, RoHS and EMC standards.

### Our Warehouse

All our products are stored in our 1500m<sup>2</sup> warehouse in Shenzhen. The warehouse has stock of all necessary materials for short deliveries.

# Profiles Manufacturing

Aluminum Billet

Aluminum Profile Die

Profile Extrusion

Profile Anodizing

Powder coating

The vast majority of profiles in this catalog have been conceived, **designed by Ledwide and manufactured in Foshan city** (our joint venture factory). For this we have used **an excellent raw material** and have been manufactured under quality standards more demanding and rigorous in **profile dies, extruding, anodized, polishing and powder coating** etc ...

Quality aluminum profile (5 years warranty) with tolerances that are following European Directives: LVD 2014/35/EU, EN 62493:2015; EN 62471:2008. The alloy used is **6063 starting from an aluminum "billet" with a purity between 95-98% and applying a T5 treatment.**

The anodized ones we have made from thickness of 1.2mm to 3.5mm for better heat dissipation, and a **max. length 6000mm.**

# Lens / Diffusers Manufacturing

Ledwide using monomer from **Germany Brand "Evonik" UV resistant** PMMA/Acrylic diffusers ( at least 2 years warranty) to suit most of ALU profile extrusions.

PMMA: a material with **high optical performances**, used in applications involving highest transparency and great diffusing properties.

Using LED CONTROL colors, great performances in LED lighting are ensured, like the **invisibility of spots and an excellent transmission-diffusion ration.**

PMMA, which is actually a fragile material, but Ledwide has successfully reinforced with **HIGH-IMPACT resistant material, more flexible** and can be rolled package for easy delivery.

Also for this material, LEDWIDE offers finishes like Opal, Frosted, Milky, Transparent, colored, striped, microprismatic. PMMA is a **UV-resistant material**, so no further protections are required.

Thanks to the blend of different materials diffusion effects are obtained, that result in high transparency, completely **hiding the LED-Spots.**

A great innovation for LED-Lamps satisfying all customer's requests in term of esthetic and functionality, colours, flexibility and innovation.

Ledwide is offering our long term customers following services helps your businesses to take competitive advantage over others.

And so on...  
We are always growing together with our customers.
