Health-care products

Cosmetic

Identify

Danshen Root is cylindrical or conical, slightly curved and branched.

The surface is brick red or brownish red, rough, with irregular longitudinal grooves and fibrous root marks.

Hard and brittle texture, easy to break

The wooden tube bundles are yellow and white, arranged radially (the chrysanthemum core is obvious)

The smell is fragrant, the taste is light, and it is slightly bitter.

Why Danshen choose medium films instead of large ones?

Because the tanshinone, salvianol and other ingredients are mainly concentrated between the epidermis and xylem of the root of danshen, too much wood fiber in the xylem of the too large pieces, so the content of tanshinone is relatively small, and most of the particularly large pieces are from the root of danshen The head (off the ground) is cut into very low content.

How to distinguish whether Danshen contain sulfur?

*Look: The chrysanthemum ring of non-sulfur smoked salvia is obvious, and there is a black cambium cut loose between the outer skin and the chrysanthemum ring.

*Smell: No pungent odor and contains natural herbal fragrance

*Taste: The taste is sweet, without sour taste when chewed or brewed.

Scope of Business

Boherbs Co., Ltd. is a professional manufacturer and wholesaler for herbs & herbal powder (organic certified & conventional standard), plant extract, food ingredients, spices and herbal tea. We would like to provide raw materials for pharmaceutical factory, scientific research institutions, and health products company and so on.

We are capable to provide One-step solution for contract manufacturing like capsules, teabags, tablets etc.

Sample orders are available to do the tests.
