Description

Boherbs' farm use of natural materials and traditional methods for growing without using chemicals or artificial fertilizers, which are harmful to both our health and the environment.

We aim to show people around the world that organic farming methods can be profitable as well as healthy.

What is the difference between wasabi and horseradish?

There are three types of horseradish:

1. Water planted called water WASABI, or water horseradish. It grows in perennial mountain spring water and is very picky about the growth environment. Only a few countries such as Japan have small areas of cultivation.
2. Horseradish planted on high mountains. It has the same growth period as water WASABI for 2 years. It also has very demanding growth environment requirements. So only Yunnan , Sichuan and other places have a small amount of planting.

3. Grown on land, called Lu WASABI, which is commonly referred to as horseradish.

Company

Boherbs Co., Ltd, is a professional manufacturer, supplier and wholesaler for certified organic and premium quality herbs, plant extracts and natural ingredients in the pharmaceutical, nutraceutical food and natural cosmetic industries.

We cooperate with the United States, Canada, Germany, Australia and other countries have friendly exchanges and cooperation, deeply trusted.

We can meet the diverse needs of customers.
