Quality

The product is dry, heavy, hard and farinaceous.

Boherbs' Fo-ti root is organic certified, both EU Organic and USDA Organic(NOP).

Nature, Taste and Meridian attribution

The prepared sample is sweet and astringent in taste, slightly warm in nature.

The crude sample is sweet and bitter in taste, mild in nature. The liver, kidney and large intestine meridians in attribution for both samples.

Active Ingredients

It contains phospholipids, anthraquinones and glucosides including chrysophanol, chrysophanol anthrone, emodin, physcion and rhein. Chrysophanol and emodin are the key ingredients of anthraquinones.

Advantage

1. Freshly mined, natural and healthy, and remove impurities by hands.
2. Using traditional production technology. The prepared shouwu slices are large, after breaking it, you can clearly see that there is a colloidal layer on the section. This is the key feature of whether the Heshouwu is made through.
3. No sulphur, no additives, no pesticide residues: Black color, uniform flakes, hard texture, irregularly shrunken pieces, brown or brown-black surface, uneven.
4. Excellent production management and quality inspection team, product quality can be guaranteed

Action

The prepared sample: Replenish the essence and blood, reinforce the kidney and blacken the hair.
The crude sample: Relieve episodes of malaria, remove toxic substance, loosen the bowel and relieve constipation.

Usage and Dosage

10-30g for decoction. The prepared sample is used for replenishing essence and blood, crude samples for relieving episodes of malaria, loosening the bowel, and removing toxic substance.

Processing Methods and Functions

1. Raw Radix Polygoni Multiflori

Method: Remove impurities, clean, moisten drugs and cut them into thick pieces, then make them dry.

Function: It can remove toxicity for detumescence, and moisten dryness to relax bowels and check malaria. It is used for the dryness of the intestine and constipation, ulceration, swelling, itching and pain.

2. Steaming Radix Polygoni Multiflori

Method: Put drugs with soybean juice in a non-iron steam container, then steam until the decoction of black soybean is absorbed thoroughly by drugs and drugs show a brown color, take drugs out and dry. 10kg black soybean per 100kg drugs.

Function: After being steamed, it turns warm and sweet. It can tone up the liver and kidney, reinforce blood and essence, make beard and hair black and invigorate bones and muscles.

Description

1. With red stems, egg shaped leaves and either white or light green flowers, Organic Polygonum multiflorum, also called Fo-ti root, is a herbaceous perennial vine native to China.
2. And in cosmetics, fo-ti extract is used as an ingredient in hair and skin care products.

What is the difference between raw Shouwu and Prepared Shouwu?

Depending on the method of processing, there are usually two types of Fo-Ti root on the market
Raw Shouwu: dug out and dried directly. It has the function of detoxifying & expelling carbuncle.

Prepared (stewed or steamed): Cut the shouwu into slices, mix well with black bean juice and rice wine, put them together steamed, and then dried after steaming. After repeated steaming and drying, it is called Prepared shouwu.

It mainly for nourishing liver and kidney, benefiting life essence and blacking hair.

Prepared

Raw
