Active Ingredients

The fruit mainly contains flavonoids, quercetin-3—O-rhamnoside.

Processing Methods

Sifting off the muddy seeds and picking up the stalk impurities

Storage: store it in a dry and cool place, avoid direct sun exposure.

Advantage

1. In Boherbs' **local wild farm in Guangxi province**, the largest producing area in China, Star Anise fruit is delicately harvested and processed when the new crop is harvested in September.

2. Freshly picked

When the fruit changes from cyan to yellow, it can be harvested on sunny days.

- (1) The fruit is fully mature and harvested after landing.
- (2) Tree picking, when the fruit turns yellow, people climb up the tree to harvest.

3. Sulfur-free, green and healthy

Does the Star Anise must have eight petals?

The Star Anise most of its appearance is eight horns,and looks like a star, so this plant is named "Star Anise ", but it cannot be said that all of them are eight horns.

The mature star anise contains seeds when dried. The varieties are different, and some have more than eight horns.

The star anise is easy to peel off during the drying process, and fall off into three to four corners, which does not affect the taste and efficacy.

How to identify whether star anise has been smoked by sulfur?

The sulphur-smoked star anise is very yellow.

In real life, many people like to look at their appearance, and think that the bright and yellow color star anise quality is good. In fact, these bright colors are all sulfur smoked.
